Journey to Federal IT Modernization DATA TO INSIGHT

MeriTalk, in partnership with Cohesity, examined data management speedbumps and best practices on the Federal government's journey to a modern, data-driven future.

JOURNEY TO MODERNIZATION

The Federal government is **spending more than ever** on modernization – with IT funding up to **$89.3B in 2020**[1]

But while **73%** of Feds say their agency has a defined IT modernization roadmap

Just **24%** rate their efforts to date as excellent[2]

DATA SPEEDBUMPS

70% of Federal IT managers say they are **most concerned** about data security, privacy, and integrity in the cloud[3]

91% of global IT decision-makers point to **mass data fragmentation** as the reason public cloud has yet to fully deliver on its promise[4]
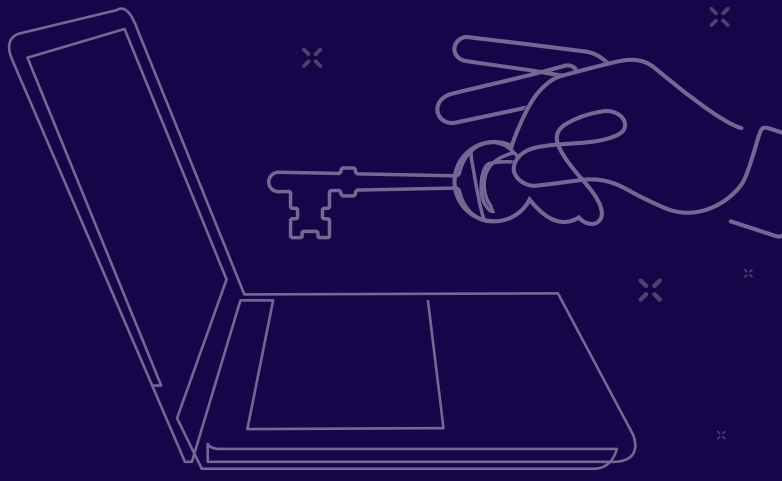

#1 OPPORTUNITY Feds agree **improving data sharing** is the #1 opportunity to accelerate modernization[2]

SECURITY POTHOLES

More than half of Feds say their current level of complexity and lack of visibility is putting them at **significant risk** for a security breach[5]

Still, most are focused on **traditional security methods**[6]

REROUTING: DESTINATION MODERNIZATION

88% of global IT decision makers believe the benefits of the public cloud can be realized if solutions are in place to **solve mass data fragmentation challenges** across their multi-cloud environments[4]

Additionally,

89% of Federal IT leaders say **hyper converged infrastructure (HCI)** could accelerate core modernization efforts like cloud, automation, and advanced analytics[7]

To succeed:

CONSOLIDATE solutions for backup, archiving, analytics, etc. onto a single platform

MANAGE all aspects of secondary storage through a single GUI

RUN applications on the same platform to accelerate digital transformation

> " Some of the work that we will do in the data area is the most important work for how we position ourselves for decades to come"
> –Suzette Kent, Federal CIO

Cohesity helps Federal agencies reinvent data management strategies to eliminate mass data fragmentation and embrace modernization.
